INTL CLASS: H04N-001/00; G06F-013/00; H04N-007/15

ABSTRACT

...TO BE SOLVED: To simulate an actual conference with good operability by
closely interlocking a common use white board equipment with a
common use material display device...

...SOLUTION: The cooperative work aid system is composed of a plurality
of terminal equipments, interconnected by a network 20 where each is
composed of a commonly used white board equipment 31 provided
with a
means providing the same image among a plurality of terminal
equipments

and a commonly used material display device 32 provided with a means displaying an image of a paper material used in common among a plurality of the terminal equipments. In this case, image data exchange means 8, 9 are provided to the commonly used white board equipment 31, commonly used material display device 32 to exchange image data on the screen between the commonly used white board equipment 31 and the common use material display device 32 and image data used by the commonly used white board equipment 31 and image data used for the commonly used material display device 32 are not independently received, by exchanging directly the image data between the commonly used white board equipment 31 and the commonly used material display device 32.

...SPECIFICATION system 50 mail services. Because of the importance of timely handling of the information, both shippers and carriers may use the system's interactive services to resolve problems. In addition, a supplier can search automatically the freight services posted on a system bulletin board . The main advantage of this service is the ability to piggyback partial loads on already scheduled routes . To search the bulletin board, the shipper has to specify details about the source, destination, and nature of the load as well as limitations, if any, on the carriers he is willing to use. The selected offers are then submitted to the shipper's...

Abstract: The instrumentation and control systems at Fulton Station incorporate modern, solid-state electronic equipment mounted in standard size modular control boards. The control room equipment is packaged and arranged to satisfy nuclear plant design requirements as well as human engineering needs. The individual control board or console sections are shop-tested prior to shipment. Use of modular boards and interfacing prefabricated cabling allows for installation of electronic equipment after building construction is complete and well into the construction phase of the plant.

ASIA: VTEL ANNOUNCES TWO NEW PRODUCTS

US-based video-conferencing systems provider, VTEL has announced two new products from its Smart Video-conferencing range. The products are:
1)
SmartView, which allows users to incorporate paper documents into video-conferences; and 2) Smart Board, an integrated electronic white-board that displays an instructor's notes in a window and the instructor's image simultaneously.
